## ## Abstract

4DMap is an **\*\*inspection coordinate frame\*\***. It is not a truth engine,  
not Lumen, not GIS, not a Node Gate, and not certified forensics.

It maps evidence already produced by TemporalLock, StaticClock,  
ChronoLock, TrajectoryLock, and SpectralLock onto four axes:

| Glyph        | Name       | Axis                               |
|--------------|------------|------------------------------------|
| -----        | -----      | -----                              |
| <b>**T**</b> | Clock      | when a pin sits                    |
| <b>**?**</b> | Interval   | span or gap between pins           |
| <b>**?**</b> | Trajectory | stacked / walked motion of pins    |
| <b>**?**</b> | Pattern    | class, cohort, absence, or silence |

Operators and engines write and read **\*\*4DM-CARD\*\*** receipts. FragGate  
grounded claims may cite join types. ChainLock may stamp a walk when  
the operator seals. QNS/QNM do not carry 4DMap photons.

Public identity is **\*\*Aziel Eliab\*\*** only. GodLock is a sibling product  
name elsewhere. Never attach a GodLock-plus-AZ identity label.

---

## ## Pipeline placement

4DMap is **\*\*not\*\*** inserted as another sequential gate. It sits at the  
**\*\*domain-door / inspection frame\*\***:

'''

PUBLIC/AGENTS/UI ? FragGate ? SweepGate ? ChainLock-IN ? DecisionGATE ? AZPIPE  
? Domain Doors (isolated engines) ??? 4DMap inspection cards sit HERE as
